DETAILED ACTION

1. Acknowledgment is made in the receipt of the priority papers, the information disclosure statement, the preliminary amendment and the oath filed January 31, 2006.

Claim Objections

2. Claims 9, 10, 13 and 14 are objected to because of the following informalities: claims 9, 10 and 14 depend upon cancelled claim 7; claim 13 lines 3-7 recite claim 14 and should be deleted. Appropriate correction is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 8-14 are rejected under 35 U.S.C. 102(b) as being anticipated by US 6,183,049 to Oka et al.

Re-claims 8, 9 and 14, Oka et al. disclose a method of operating a vehicle brake system having a vacuum brake booster, the method comprising: wherein when an approach to a point when the auxiliary-force to actuating-force ratio (such as a run-out condition for the booster) falls below a predetermined ratio a nominal pressure is generated (the nominal pressure is shown as a new characteristic curve, equation 2, in figure 3).

Re-claims 10-13, the curves are a characteristic of the booster.

5. Claims 8 and 10-13 are rejected under 35 U.S.C. 102(b) as being anticipated by US 5,938,297 to Whaite et al.

Application/Control Number:

10/566,772

Art Unit: 3683

Re-claim 8, Whaite et al. disclose a nominal pressure is generated by a hydraulic source when a vacuum booster approaches a run-out condition. This increases the operating range of the booster.

Re-claims 10-13, the curves are a characteristic of the booster.

Conclusion

- 6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Mathues et al., Takasaki et al., and Pueschel et al. each teach a hydraulic boost to a vacuum booster approaching run-out.
- 7. Any inquiries concerning this communication or earlier communications from the examiner should be directed to Thomas Williams whose telephone number is 571-272-7128. The examiner can normally be reached on Wednesday-Friday from 6:00 AM to 4:30 PM.
